

Prototype Submission Phase

TEAM NAME and MEMBER DETAILS

Trapti S Singh

THEME: *WorkPulse AI: Intelligent Meeting and Task Management Assistant*

PROBLEM STATEMENT

Modern organizations rely on multiple communication channels such as Microsoft Teams, Outlook, emails, chats, documents, and virtual meetings. Important decisions, action items, and commitments are often scattered across these platforms, resulting in missed deadlines, inefficient follow-ups, duplicated work, and reduced productivity. Managers spend significant time preparing meeting notes, assigning tasks, tracking progress, and following up with team members. Employees waste valuable time searching for information rather than focusing on meaningful work.

SOLUTION

- WorkPulse AI
 - An AI-powered workplace assistant that:
 - Meeting Intelligence
 - Records Teams/Zoom meetings
 - Generates summaries automatically
 - Extracts action items
 - Assigns owners
 - Creates deadlines
 - Team Knowledge Hub
- Searches across:
 - Teams
 - Outlook
 - SharePoint
 - Documents
 - Answers questions instantly
- Example:
 - Employee asks:
 - What did Ajay commit in last week's client meeting?
- AI instantly provides answer.

METHODOLOGY

- Meeting transcripts are collected from Microsoft Teams.
- Azure OpenAI analyzes the content and generates concise summaries.
- AI extracts action items, deadlines, and responsible stakeholders.
- Tasks are automatically stored and tracked.
- Reminder notifications are sent through Microsoft Teams.
- Employees can ask questions in natural language and receive contextual answers based on historical meetings and documents.
- Management dashboards provide visibility into productivity and task completion.

WORKING PROTOTYPE

WORKFLOW

Microsoft Teams

Meeting Transcript

Azure OpenAI

Task Extraction

Azure Cosmos DB

Dashboard

Teams Notifications

Prototype

- Demo Flow
- Upload meeting transcript
- AI generates summary
- Tasks extracted
- Dashboard updated
- Reminder sent

Attachments

Future Scope

- Voice assistant
- Multi-agent collaboration
- Predict project delays
- Employee productivity insights
- Autonomous task execution
